

## Beeman Accessories & Misc.

### Pell Seat

A handy tool that increases the efficiency of all airguns. Airgun accuracy depends on pellet uniformity and velocity depends on the air seal. A Pell Seat can help on both counts. Fits all calibers .177 thru .25.

The PELL SEAT uniformly seats the pellet and creates a perfect seal - all in one motion. (BEE7199)

### Pellet Pouches (belt pouch)

A pellet pouch is a handy accessory for carrying pellets in the field (also great for ammunition, etc.). Experienced shooters use separate pouches for various calibers or styles of pellet.

#### NYLON DROP POUCH

Sturdy. Velcro flap closure.

#### LEATHER BELT POUCH

pop open to access, pop closed. Black.

### Beeman Logo Gun Case

Super Tuff Rifle Case, black nylon outer cover with the distinctive Beeman logo. Heavy 1" foam padding on both sides for protection with twill lining. Wrap-around handles and long nylon zipper. Now with zipper side pocket for carrying accessories. This attractive case fits rifles with (or without) scopes to 48" length (will fit sporting guns with muzzlebrake). Pistol case fits most air pistols with or without scope.

BEE6121 -- Beeman 20x9" Pistol Case for airguns with or without scope. Fits P-1, P-2, P-3, Tempest, Hurricane, RWS 5G Magnum, others. (Approx 10"x20")

BEE6448 -- Beeman 48" Gun Case with side pocket for accessories for airguns with or without scope

## Pellet Traps & Targets

A single pellet from a magnum airgun can pass completely through a 1" board and more. Repeated shots will work through even more. An adequate backstop is important, especially for indoor shooting. (Caution: do not use steel BB's in any steel trap.)

### Deluxe Silent Trap

The Beeman Deluxe Silent Trap (BEE4030) is everything a trap should be. Pellets are safely and quietly captured in a thick layer of Ballistic Putty - with no annoying metallic clang. The target area is 8"x10", making it useful at longer range. The frame is crafted of Philippine Tigerwood. It may be used free-standing, or, by attaching a hanger, suspended on a wall. This is truly one of the most attractive, safest, & most desirable pellet traps available. (shown with paper target taped to the replaceable Target Face)

**NOTICE: The Silent Trap is no longer available. Shooters can make their own trap by making a wood-framed shadowbox of the appropriate size (about 8x10x3 to 10x12x3) and packing it with 5 or 10 pounds of ballistic putty. Putty should be a minimum 1-1/2 to 2 inches deep for best performance.**

**BALLISTIC PUTTY** (BEE7242) is available for penetration testing and for use with other traps for safety and sound deadening.

### Metallic Silhouette Trap

**METALLIC SILHOUETTE TRAP** is a heavy, welded steel trap that will give years of use. Four silhouette figures swing on a removable crossbar. Large 14"x9" size; trap may be used indoors or out and at extended range. (BEE4021)

Steel BB's should not be used with any metal targets and pellet traps.

### Shooting Rests

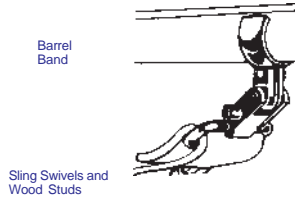

Shooting Rests can make accuracy testing easier by reducing human error - not just for airguns.

**LEATHER SANDBAG RESTS** are *Made in the USA* of top grain leather. Set of two, front and rear. Simple filling instructions.

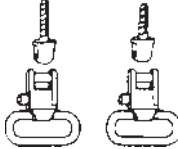

### Sling Swivels

A sling can make field use of an air rifle more convenient. Most rifles will require both the appropriate **BARREL BAND** and a **SLING SWIVEL & Wood Stud Set** (with instructions). Quick detachable swivels allow easy sling removal. *These swivels accept any sling which is 1" at the attachment point.*

Barrel Band

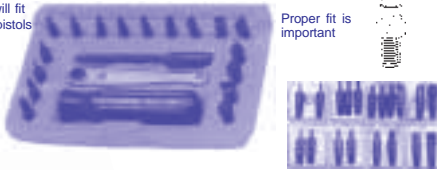

Sling Swivels and Wood Studs

Use a sling on a sporting air rifle for carrying, not military-style shooting

### Gunsmith Screwdriver Set

A **GUNSMITH SCREWDRIVER SET** (BEE7175) should be in every shooter's kit and tool box. The hollow ground screwdriver bits fit the enclosed handle, extension, and ratchet. Includes phillips bits. All in a compact storage box (20-pcs.). A optional 18-piece **ALLEN HEAD TIP SET** is also available (BEE7176)

Proper fit is important

BEE4050	Airgun Gallery, swinging target.....	44.84

### Beeman Metallic Airgun Targets

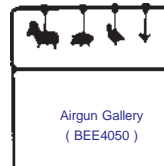

**Metallic Silhouette Targets** are scaled for airgun competition and are usable in any safe area where suitable distances are available. Metallic Silhouette is an exciting and challenging airgun sport. A set of four targets includes one each of: desert chicken, wild pig, wild turkey, desert ram. Order several sets to avoid frequent resetting. Five sets make a complete course. Instructions included.

BEE4042 Economy Silhouettes cast alloy.

BEE4050 Airgun Gallery has one each of the silhouettes suspended from a single arch. Although it isn't for formal competition, it is great fun & good practice. Who knows who the next "Champion of the Universe" might be.

FSI paper Targets: short range and full airgun scale. See page 16.

Steel BB's should not be used with any metal targets and pellet traps. Always use eye protection

Airgun Gallery (BEE4050)

Fly's eye .new

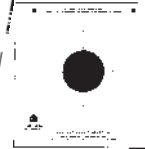

The Original Fly Shooter (BEE7260)

This thing is so much fun that it's almost a shame that it doesn't include an extra supply of flies! (not a beeman product)
