A unique chronograph system for Airgunners

the FSI / Chrony Chronograph with Indoor Shooting Light Fixture.

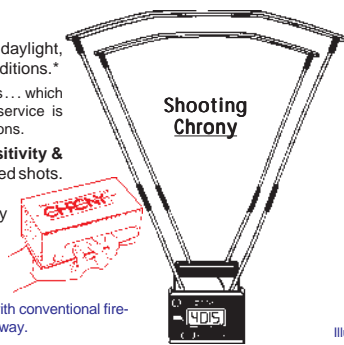

Airgunners;

With this special chronograph system you can shoot indoors regardless of daylight, rain, snow, wind, or other outdoor conditions.*

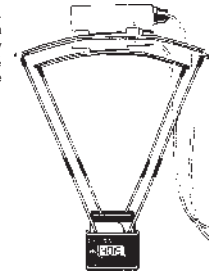

Now you can know how your airgun performs... which pellets are best, when to clean, when service is needed. Collect data for ballistics calculations.

NEW F1 Chrony, now with Extra Sensitivity & larger shooting area. Fewer undetected shots.

The Chrony operates on one 9v battery (not included). The light fixture plugs directly into 110v household current.

Simple operation and setup/take down. The Chrony will mount on a standard camera tripod and uses a standard 9v battery (not included), weighs only 2½ pounds, folds to just 7½ inches. Removable light fixture operates on 110vAC.

Chrony system with Indoor Shooting Light Fixture in place

the Shooting Chrony with Indoor Shooting Light Fixture

stock# FSI 0202
Chrony \$128.88

With full factory instructions

* Naturally, it works superbly outdoors and with conventional firearms, too—we wouldn't have it any other way.

A complete chronograph system for airgunners

A word of thanks . . .

Since the introduction of the **FSI Airgun Ballistic Tables**. Interest been far greater than our projection, with sales on every continent except Antarctica.

The feedback has been fantastic, proving that many of you find the book helpful and are not only interested in the ballistic performance of airguns in general, but are also interested in the specific ballistic performance of your airguns.

The **FSI/Chrony airgun chronograph system** above is more advanced than the version I used during the months of testing which lead to the FSI Tables. It is a great tool

which will allow any airgunner to gather custom velocity data. It is a natural companion for the FSI Airgun books.

Using the chronograph in conjunction with the **FSI Airgun Ballistic Tables** (FSI0095) you will know exactly which already-prepared ballistic chart to use for each pellet in each of your airguns.

With **FSI Advanced Airgun Ballistics** (FSI0097) you can use the chronograph data gathered with your pellets in your airguns to generate custom data charts personally tailored to your needs.

The **FSI Airgun Data Log** (FSI0093) is designed to help you record all sorts of information about your airguns and tests.

See page 21 for more about these FSI Airgun books.

Tip: The technical services people at the various companies may be able to solve your problem over the phone. Why not give them a call first? It easily save time and effort.

- Airgun Scopes -

Airgun Scopes help you to shoot better.

They let you see and aim more precisely—for more accurate shooting. Scopes are an advantage for all shooters and become even more valuable at about age thirty when the eyes start losing the ability to focus simultaneously on the front sight, the rear sight and the target.

Airgun scopes are specially designed with higher standards to resist the unique bidirectional recoil of magnum airguns which can destroy most "normal" scopes in just a few shots.

Additionally, they will focus (or are pre-focused) for precise target clarity at normal airgun ranges—most scopes won't—a point to keep in mind even for non-recoiling airguns.

"Gimics and gizmos" can get in the way - lighted reticles, mil-dot crosshairs, tall target adjustor knobs can make things more complicated than they need to be.

Magnification (Power): All other factors being equal, increasing magnification power will increase the apparent size of the target (bring it closer). When target shooting, one

can frequently see the pellet holes and watch the group develop and more precise aiming may be possible. At long range, targets may be more easily seen—remember that airgun targets are often smaller in scale than conventional targets. The downside to high magnification can be a decreased field-of-view and brightness, increasing the time required to locate the target through the scope or making it difficult to see under low light conditions. For hunting and quick shooting, lower magnification will increase the field-of-view and work better in low light.

For many shooters, a variable power scope will offer low power for hunting and low light as well as higher power for long range and target.

We carry airgun scopes by:

BEEMAN pg 10 **RWS** pg 6
BUSHNELL pg 17 **TASCO** pg 17

Crosman CenterPoint pg 16

Use a scope - shoot better - have more fun!

It's your job we'll help, but we can't do it for you

You must decide what is best for you and your customers.

We CAN help with questions and certain compatibility issues and tell you what we and others think about certain products we carry.

OUR POLICY: We will not make recommendations. We WILL try to provide you with information to help you pick what is best for you.

We won't tell you what **you** "need."

We can't know what **you** will like.

We don't know how **you** will use it or how accurately **you** will be able to shoot it.

We can't know if all of various combinations are compatible or suitable for **your** situation.

We will try to be helpful, but please don't put us on the spot - the best advice we can give is that you do your own homework; it is the only way that you will best suit your needs. And please read our terms of sale. We sell only new, fresh merchandise and can not accept returns because you "didn't like it," "changed your mind," "it isn't what you thought it was" or "the salesman recommended it" (he didn't).
